The EMBnet Journal Special Issue “Biostatistics & Mathematical Modelling in Bioinformatics” is dedicated in the promotion of scientific papers on applied bioinformatics, biostatistics and mathematical modelling for current research. A number of published research articles herein are set to explore and validate through small-scale clinical trials non-invasive interventions and instruments in subjects in a wide range of conditions, such as cancer, psychological stress,

viral infections *etc.*, and biostatistics methods are employed to evaluate the results. Additionally, network analysis tools, structural bioinformatics and molecular modelling techniques are presented based on state-of-the-art algorithms, contributing to the eminent field of Bioinformatics and Big Data Analytics and AI.
